

1 vim 中实现括号和引号自动补全

将以下内容加入/etc/vim/vimrc 中将实现 “、(、[、的自动补全，还可以实现 html、xml 中 < 的自动补全。

```

1      inoremap ( ()<Esc>i
2      inoremap [ []<Esc>i
3      inoremap { {<CR><Esc>O
4      autocmd Syntax html,xml,vim inoremap < <<<Esc>i
5      inoremap ) <c-r>=ClosePair('')<CR>
6      inoremap ] <c-r>=ClosePair(']')<CR>
7      inoremap } <c-r>=CloseBracket()<CR>
8      inoremap " <c-r>=QuoteDelim('')<CR>
9      inoremap ' <c-r>=QuoteDelim('')<CR>
10
11     function ClosePair(char)
12     if getline('.')[col('.') - 1] == a:char
13     return "<Right>"
14     else
15     return a:char
16     endif
17     endf
18
19     function CloseBracket()
20     if match(getline(line('.') + 1), '\s*}') < 0
21     return "<CR>"
22     else
23     return "<Esc>j0f}a"
24     endif
25     endf
26
27     function QuoteDelim(char)
28     let line = getline('.')
29     let col = col('.')
30     if line[col - 2] == ""
31     "Inserting a quoted quotation mark into the string
32     return a:char
33     elseif line[col - 1] == a:char
34     "Escaping out of the string
35     return "<Right>"
36     else
37     "Starting a string
38     return a:char.a:char."<Esc>i"
39     endif
40     endf

```
